

Appendix D

Greenhouse Gas Emissions Inventory and Reference Case Projections

A separate report titled “Iowa Greenhouse Gas Inventory and Reference Case Projections, 1990–2025,” was used throughout the Iowa Climate Change Advisory Council (ICCAC) process to provide detailed documentation on current and projected emissions. The preliminary draft report (April 2008), was reviewed by the Council and its five Subcommittees and revised to address comments approved by the ICCAC as the process and analysis moved forward.

The final report, incorporating comments provided by the Subcommittees that were approved by the ICCAC at their September 2008 meeting and incorporated into the final report during October, is available at: http://www.iaclimatechange.us/Inventory_Forecast_Report.cfm. At the 7th ICCAC meeting in November 2008 the Council received the final I-F Report and agreed to file and forward it to the Governor and Legislature.
